## XOV to integrate Bancor Protocol to Provide Token Liquidity for Millions of Global Decentralised Banking Customers

**London – 6 June 2018** – XOV, the Global Decentralised Banking solution that will serve millions of people worldwide with decentralised banking services, has today announced its integration of the **Bancor Protocol** to provide continuous liquidity. XOV is providing an academically researched stable digital currency network called XOVnet as part of its decentralised banking revolution, and recently listed their XOV token on Token Store and BarterDEX for atomic swaps.

By integrating the Bancor Protocol, XOV token holders will gain access to continuous liquidity regardless of trade volume or exchange listings, through the Bancor Network, where any integrated token can be automatically converted to any other directly from the Bancor Wallet or any Web3 wallet, such as MetaMask. Currently integrated tokens include ETH, BNT (the Bancor Network Token), GNO (Gnosis), BNB (Binance) and a long list of announced projects soon to be activated.

*“We anticipate having a huge community and massive demand for the XOV token, so it absolutely makes sense for us to provide our users with an easy way to convert tokens,”* said David Alexander-Knowles, CEO XOV. *“Integrating with Bancor will provide liquidity to everyone who wants to be a part of XOV as we build our platform and revolutionise the banking sector.”*

XOV will activate a Relay Token with 2% of its circulating token supply within a week following the successful

completion of liquidity funding later in the year. Users will be able to purchase and sell XOV tokens directly from the Bancor Wallet or any Web3 wallet at a formulaically calculated price.

### About XOV

XOV is creating a highly stabilised digital currency network that is academically researched and will issue the currency using a decentralised Central Bank (CBCC). The currency will be asset backed using transparent reserves. XOV will also provide a range of decentralised banking services, including bank accounts, loans, insurance, credit cards and other financial products and services, and is working with a range of retail merchants to accept the XOV currency for goods and services. ### About Bancor

The Bancor Protocol is a standard for the creation of Smart Tokens™, cryptocurrencies with built-in convertibility directly through their smart contracts. Bancor utilizes an innovative token “connector” method to enable formulaic price calculation and continuous liquidity for all integrated tokens, without needing to match two parties in an exchange. Smart Tokens interconnect to form token liquidity networks, allowing user-generated cryptocurrencies to thrive. To convert tokens instantly, visit the **Bancor Web App** or join the **Bancor Telegram group** for more information.
